

December Superintendents Report

January 14, 2024

A correction to the Precipitation for the year 2024 needs to be made. The number (47.77) given last month was the 12 Month Rolling Total. The total for January through November should have been 41.92 MGD.

December 11, 2024, we received a text from Kurt Brown asking if we were taking max, I answered 59.72 MGD and sent another explaining 46.6 MGD from Bing and 14.58 from JC. At the time of the CSO events we were pumping 60+ MGD.

On December 12, 2024, Ron Lake, Josh Holland, Kurt Brown, Ron Warwick, Adam Afify and I had a Teams meeting where we compared all three entities flow data and time stamps. All three systems reported the same data. Please note, this rain event started very slowly and gradually picked up. Compared to many of our rain events that happen as a downpour.

In December we received 3.15 inches of precipitation, for a total of 45.07 inches this year.

The Average flow was 17.47 MGD with a total of 541.50 million gallons.

CBOD = 5 mg/L, 97% removal, TSS = 3 mg/L, 98% removal, Fecals 6 MPN, Ammonia = 0.178 mg/L, 98% Conversion and Phos = 0.19 mg/L, 96% removal, TN = 2.6 mg/L for 86% removal.

In 2024 we removed the following from our influent: 8,673,920 Lbs of TSS, 8,053,897 Lbs of CBOD, 769,064 Lbs of TN, and 158,330 Lbs of Phosphorus.

Micro-Turbines produced 92,143 KWH in December, up from 88,576 KWH in November. Total Miro-Turbine electric production for 2024 was 958,907 KWH.

Solar produced 1967 KWH in December down from 3588 KWH in November. The total production of electricity from Solar for 2024 was 68,973 KWH. This represents 6,949 KWH more than the annual estimate by the vendor.

After 5 years of service, the Solar array has produced approximately 20% of the initial cost of the Solar Cells. The cost of electricity going up will only decrease the payback time.

The year 2024 saw Mechanics perform 5,834 Preventive maintenance tasks utilizing the CMMS software. They removed Main pump number 4 for rebuild. Removed, inspected, and replaced oil in 4 Secondary Influent Pumps (SIPS). Removed and replaced with an upgraded Archimedes screw the North Grit conveyor. Removed and replaced the Backwash Spray water pump Check Valve. Brought in PW Tech (The Manufacturer) to re-furbish and upgrade both Mechanical thickeners. Replaced damaged entries to Gravity thickeners. Completed all buildings Roof inspections and repairs. Installed a flagpole, in conjunction with operators, drained cleaned and had both methanol tanks inspected, All Chemical Bulk storage tanks, and our Petroleum Bulk storage tank inspected.

This year the Operations department has drained, cleaned, and inspected all Primary tanks, CN Cells and DN Cells. Resolved a digester feed sludge Magmeter issue, worked with mechanics to Drain and Clean Ferric and Methanol tanks, Senior Operator tested and became an “A/B” Operator and provided training for all in his department to become PBS “C” operators with an eye to provide training for all employees that go into the field to become “C” operators. The department has met every single Parameter of the SPDES permit for the 28 continuous months since the CN Viewport issue recovery. They continue to refine chemical use through Jar-Testing, process sampling, and optimizing dosing setpoints ultimately reduces our chemical budget. Operations Department has been forming relationships with City, Town, and Village Public works departments to foster collaboration and collection system efficiency as seen in discovering the source of a colored influent sample. Continued training and creating an environment of personal growth and advancement at the facility to ensure a more skilled and capable team for future operational success.

The electrical/instrumentation department completed just over 800 Preventive maintenance tasks utilizing the CMMS program. They worked with Matco to provide them with the appropriate 4800 volt switching operations to enable maintenance of the Breakers for Headhouse and LVS 4 gear which feed the Digester complex. They wired in numerous receptacles throughout the plant to enhance functionality and safety. Added momentary push buttons to the Scum Pit control panels. Wired in a ground for the rebuilt Plant water pumps, uncovered a construction damaged Fiber Optic cable, wired in a new Air conditioning Unit in Building 10, maintained the ChemScan units and UV system, and calibrated/Bump tested gas monitors and instrumentation throughout the facility. They received refresher training with PowerFlo Technologies, ChemScan, WesTech and Wedeco.

We had zero lost work time due to injuries this year, Safety officer provided 18 required training classes and retention of all safety related records, Safety officer continues to work with all departments to create a safe work environment, Started a Hepatitis vaccination program.

Management called in PESH to look at our confined space entries and ensure they align with PESH guidelines.

We had an EPA IWPP audit this year and told us we were one of the better run IWPP programs in the State. We eventually had a closing conference with the EPA on 12/17/2024 and await their conclusion and recommendations.

This year saw the 5-Year plan adopted by the board. This report will evolve through the years to accurately inform the owners of the needs and goals of the facility to run efficiently and cost effectively.

Landfill 2024 Summary
